

DogMate

User Experience Survey Report

Analysis & Key Findings

Introduction

This report presents the findings of a user experience survey conducted for DogMate — a platform for dog ownership management and professional dog-walking services. Ten core dimensions were evaluated: usability, navigation, technical performance, management features, and trust in dog walkers. Open-ended responses complement the ratings with qualitative insight into user preferences and improvement areas.

Question 1 – Ease of Use from First Launch

The application was easy to understand and operate from the very first use.

Insight: Every single respondent rated first-launch usability at 4 or above — 77% gave a perfect 5. **DogMate's onboarding successfully gets users into the app flow without any**

prior instruction, a key differentiator in a market where new apps are frequently abandoned within minutes.

Question 2 – Navigation & Intuitiveness

Navigation between the different screens was clear and intuitive.

Insight: No score below 4, with 64% giving a perfect 5 and an average of 4.64. **The navigation structure is clear end-to-end.** The 36% who scored 4 (not 5) suggests targeted friction points exist — a Heatmap analysis would help pinpoint them.

Question 3 – GPS Location Sharing

I felt comfortable sharing my location (GPS) to discover nearby dogs and owners.

Insight: 14% of participants expressed ambivalence, giving a score of 3 — the second-lowest average in the survey (4.32). **Since SOS, real-time walker detection, and Sniff all depend on GPS, building explicit trust around location use is critical. A transparent consent screen with granular controls is strongly recommended.**

Question 4 – Technical Performance & Stability

The application responded quickly and without technical issues.

Insight: 68% scored 5 and 32% scored 4, with an average of 4.68 and zero negative responses. **The app has no significant performance issues in its current state — a strong foundation that allows full focus on features rather than infrastructure.**

Question 5 – Reminders & Medical Documents

Setting reminders (feeding, walks, medications) and storing medical documents is simple and effective.

Insight: Zero scores below 4, with an average of 4.64. In the open-ended section, reminders were also the most-cited 'most useful feature' (7 out of 9 mentions). **Reminders are the standout core feature of DogMate — invest in expanding them, including an export option for a full dog health summary.**

Question 6 – Food Inventory Tracking

Tracking food inventory is useful and helps me avoid running out at home.

Insight: 90% scored 4 or 5, with an average of 4.36. A small segment (9%) scored 3, suggesting the feature isn't universally felt as essential. **Consider integrating food inventory into a unified dog profile card to increase its visibility and perceived value.**

Question 7 – Sniff Feature

The Sniff feature (connecting nearby dogs) offers high social value for my dog.

Insight: Lowest score in the survey at 4.09, with the widest spread including scores of 2 and 3. Note that ~27% of respondents do not own dogs, naturally limiting this feature's relevance. **Sniff's value needs to be communicated upfront — a short onboarding walkthrough at first launch would significantly improve comprehension and engagement.**

Question 8 – Dog Walker Rating System

The dog walker rating system makes me trust service providers in the app more than a free search.

Insight: Second-highest score in the survey at 4.73 — 77% gave a perfect 5. **The rating system is DogMate's central trust mechanism and a primary competitive advantage. Maintain its integrity by adding review counts, timestamps, and a Verified badge for background-checked walkers.**

Question 9 – Real-Time Walker Detection

The ability to locate an available dog walker based on real-time location is an essential function for me.

Insight: 64% scored 5, average 4.55 — confirming this is a core need, not a convenience feature. **Ensure the feature is fast and reliable even in lower-coverage areas, and consider a complementary scheduling option for planned walks.**

Question 10 – SOS Emergency Feature

The SOS emergency feature is easy to find and gives me peace of mind.

Insight: 23% scored 3 — the largest share of sub-5 scores for any feature. Users who found the button loved it (59% gave a 5), but discoverability is a real problem. **Add a persistent SOS shortcut at the bottom of every screen. In an emergency, a buried button is a broken button.**

Open-Ended Questions – Analysis & Recommendations

Question 11 – Most Useful Feature

"Which feature was most useful for you, and why?"

Responses Received

- Reminders (feeding, walks, medications) — mentioned 7 times
- Emergency / SOS mode — mentioned once
- Food inventory management — mentioned once
- Dog walkers (discovery and trust) — mentioned once

Analysis & Conclusion

78% of open-ended responses cited Reminders as the most useful feature — a remarkably clear signal. The feature combines utility with emotional reassurance: users feel both more organized and more responsible. **Prioritize Reminders in the home screen layout, marketing materials, and the next development cycle.**

Question 12 – Building Trust in an Unknown Dog Walker

"What would make you trust an unknown dog walker appearing in the app?"

Responses Received

- Ratings and reviews — mentioned 4 times (including: number of raters, review dates, reviewer identity)
- Official app verification / endorsement — mentioned once
- Transparency: visibility of the other dog owner's username — mentioned once

Analysis & Conclusion

Users want context, not just a number: how many people rated the walker, and how recently. Combined with the 4.73 quantitative score for the rating system, this confirms trust is DogMate's core value proposition. **Display review count and date alongside the average score, and introduce a Verified badge for walkers who have passed a background check.**

Question 13 – Suggestions for the Next Version

"Additional features or improvements you would like to see in the next version"

Responses Received

- Multi-language support (English) — "Interface in English, not just Hebrew"
- Dog profile export — "Ability to generate a summary of the dog and all its reminders in a single file"

Analysis & Conclusion

Two clear growth vectors emerged: English support to reach new audiences, and a dog profile export to deepen loyalty among existing users. **Both are feasible in the near term and address different strategic goals — audience expansion vs. retention depth.**

Summary Table – All Scores

Feature / Dimension	Average	Rank
Ease of Use – First Launch	4.77	1
Dog Walker Rating System	4.73	2
Technical Performance	4.68	3
Navigation & Intuitiveness	4.64	4
Reminders & Medical Documents	4.64	4
Real-Time Walker Detection	4.55	6
Food Inventory Tracking	4.36	7
SOS Emergency Feature	4.36	7
GPS Location Sharing	4.32	9
Sniff Feature	4.09	10

Recommendations for the Next Version

Based on quantitative scores and open-ended responses, the following are the key recommendations for DogMate's next release:

- 1. Expand Reminders** — add a PDF export of the full dog profile, reminders, and medical records.
- 2. Increase walker rating transparency** — show review count and date alongside the score; add a Verified badge for background-checked walkers.
- 3. Make SOS permanently accessible** — add a persistent shortcut at the bottom of every screen, not only inside a specific menu.
- 4. Address GPS privacy** — add a transparent consent screen with granular location-sharing controls.
- 5. Add English support** — low-effort, high-impact expansion to new audiences including immigrants and international users.
- 6. Improve Sniff onboarding** — add a short in-app walkthrough at first launch to communicate the feature's social value.
